Annual Report - 2023

Thanking you

**For the Support that makes continuing
our Strivings possible!**

Dear Friends,

**Allow us to begin with some remembrance that may
lead us to the future!**

L. Kolisko

**and the Foundation Stone Conference
at Christmas 1923**

All of us who love anthroposophy are fully aware of the cardinal importance of this event. We are all engaged in celebrating in a dignified fashion its 100th year anniversary where R. Steiner wanted to renew the esoteric impulse underlying our movement and thus building again a foundation to a community striving.

What is perhaps less well known is that on each one of the seven days following the Foundation Day (12.24) R. Steiner gave not only an all-important esoteric meditative rhythm (which he said "should never leave us again") but included in that day specific presentations that were meant to show how the spiritual impulses would be connected to practical life.

On the 31st of December 1923, in the middle of this crucial conference, he asked L. Kolisko (10.1.1889-11.20.1976) to give the results of her experiments showing that the "influence of the smallest entities" (ultra-diluted potencies) could be shown in wave like forms.

The words that R. Steiner accompanied her presentation with were clearly meant not just for then but also pointers to the future. He remarked that her all important work was possible only through her personal sacrifice, an unending personal sacrifice. However, it was essential because anthroposophy needed to penetrate science in a new way. And then he surprisingly remarked that would donations of 50 to 75 million Swiss Francs (probably astonishingly more in today's money) be made available, then the work needed to be done in seventy-five years could be accomplished in five to ten years. Clearly, even then (and in his presence) raising funds for the sciences was not an easy task.

On that day -when her experiments were presented- R. Steiner ended with the rhythm:

Godly-Light
Christ – Light
That the elemental beings hear
From
East, West, North and South
May human beings hear it.

Following R. Steiner's advice Lily Kolisko worked with thousands of wheat seeds and discovered rhythms that had not been known before. Since the Archai Michael has chosen the world of rhythms to make his home, the importance of this work becomes ever more evident. Considering her breakthrough results one can also intuit that the elemental beings heard her.

Our Research Work

We are proud to continue in her direction and have chosen to concentrate on the work with cell cultures. Experiments with cell cultures, statistical calculations and advanced technical details should bring her strivings into the modern scientific community.

After literally many years of careful studies (demanding a lot of resources) we have succeeded to begin presenting our data such that it is acceptable to the general scientific community.

Below three such examples-that are developed far enough that they deserve to be brought to your attention:

1. Pilot Study: New Aqueous Extracts of the Mistletoe (*Viscum Album* L.) Plant, Diminish In Vitro Cell Proliferation of The NSCLC Cell Line with EGFR Mutations HCC 827

Abstract

Non-small cell lung adenocarcinoma with EGFR mutations continues to be a vexing problem due to the ability of the cancer to rapidly develop drug resistance. In vitro studies with the non-small cell lung adenocarcinoma cell line HCC827 (with an acquired mutation in the EGFR tyrosine kinase domain, E746 - A750 deletion) are relevant to the finding of increasingly effective treatments. Pharmaceutically processed, extracts of mistletoe, *Viscum album* L. (Loranthaceae), have been shown

since the 1920's to have potential in cancer therapy. They are currently the most frequently used natural preparations in complementary cancer treatments. In this pilot study we demonstrate that newly prepared standardized extractions of mistletoe (*Viscum album*, L.), from different host trees, are shown to significantly diminish the cell proliferation of the HCC 827 cell line.

2. Therapeutic applications of *Viscum Robinia* RK 30X

Abstract

The spiritual significance of the robinia tree and the mistletoe (*Viscum album* L.) growing on the robinia tree can be better understood if the anthroposophic interpretation supported by botany, mythology and other healing systems is considered. *Viscum Robinia* (RK) in its potentized form, dispensed orally, has been found helpful to strengthen the soul life of those patients who have lost faith in the possibility of healing, are overcome by worries, cannot let go of previous trauma, feel unable to go on and to persevere in spite of life's challenges. This soul condition is frequently connected to digestive disturbances. Five clinical cases are presented.

Accepted for publication in the Merkurstab Journal-scheduled for February of 2024.

3. Pilot study: rhythmical behavior of ultra-high potencies of substances in cell cultures

Abstract

Research in the hormetic field has demonstrated a bi-phasic dose response in substances such that a high dose of a substance being inhibiting/toxic can have an opposite effect at a low dose where it becomes stimulating. Hormesis confines itself to measurable levels of the substances/stressors. However, homeopathic research has shown that these bi-phasic enantiodromic effects of substances occur even at ultra-high dilutions (potencies), beyond log 24. In 1923 R. Steiner and L. Kolisko demonstrated a new phenomenon in which the

enantiodromic effects alternate semi-sinusoidally between inhibiting and stimulating activities. We have studied this phenomenon in several substances in cell cultures, confirm Kolisko's and R. Steiner's findings and discuss the significance of this rhythmical phenomenon. The mechanistic explanation is still to be elucidated but anthroposophical insights give a path to a more comprehensive understanding.

Authors: R. Rentea, M. Kamsler, M. Mueller

Accepted for publication in the Merkurstab Journal-scheduled for April of 2024.

We want to specifically thank here Tim Heath, PHD for his guidance in the initial stages of cell culture technology. Without his assistance none of the further progress would have been possible.

Also thanks to Cosmin Borcea, a forestry specialist, who with a lot of love and endurance is collecting the mistletoe from Romania and ships it to us fresh for experimentation.

New Remedies

Our research work specifically with our new extraction method has demonstrated that these mistletoe plants have the ability to lead to the death of cancer cells but also to have highly valuable stimulating effects clinically on the soul life of patients.

Detailed presentations of these results will be offered in upcoming months.

Foundational work in anthroposophy

We have not forgotten the anthroposophical mother source from which our inspirations came.

In commemoration of the 100th anniversary of the Foundation Stone Conference, and as a preparation for the future, we have organized a major conference on the theme of the metamorphosis as found in the rhythms of the Foundation Stone meditation. We have demonstrated that with this a method is given to further deepen the understanding of R. Steiner's intentions and work. We have placed this on the [Kolisko website](http://www.kolisko.org) to be viewed for those who could not attend.

Conference Participants-- October 2023

To continue our Work, we need Your Support

Dear Friends,

We don't think that it is necessary to remind any of you of the importance of this work.

Any kind of scientific work enhances anthroposophy.

The mistletoe being the central remedy of anthroposophical medicine, any kind of scientific supporting work is essential to enhance its credibility and lead to its acceptance.

The revolutionary ideas of L. Kolisko, which we have designated as the Kolisko Validation, need to be urgently continued.

However, all scientific work is extremely labor and resources intensive so we must ask for kind and generous support!

There are many ways for how you can help, donate and/or make other suggestions.

Make a [tax -deductible donation](#) and/or

- Include us in your will/legacy,
- Spread the word; make us known to your friends.

You are welcome to make specific notations if you want your contribution to go to a specific activity- webinar, substance research, outreach, etc. Thank you!

Now, at the end, I cannot close without multiple heartfelt thanks to our co-workers whose dedicated efforts made our continued developing work possible.

Many years ago, we started telling you that we had a dream, then the lab came and we were happy that we passed stringent inspections, the arduous experiments followed and today we can report results in published experimental papers and are refining work on the mistletoe remedy.

With your generous help we hope to continue into the future.

Thank you!

For the Kolisko Team,

Andrea Rentea
